The Two “Possessor Raising” Constructions of Bulgarian*

Guglielmo Cinque and Iliyana Krapova

1. Introduction.

In this article we present an analysis of a specific phenomenon of Bulgarian syntax, which can be better understood, we argue, through a comparison with Romance. As is often the case when one compares different languages, certain constructions appear not to correspond neatly. However, before surrendering to the conclusion that no neat correspondence exists across languages, one should try to see if one can find it by decomposing the complexity of the data. This is what we attempt to do here.

Bulgarian clausal dative clitics can, as in other languages, be interpreted as external possessors of a DP, provided they are contained in the same minimal clause containing the DP, and that they c-command the DP (or its trace); examples of each of these, respectively, are shown in (1-4) (cf. Guérin 1985: 48; 2003: 193f.):¹

(1) a. Kučeto mu otkapa prästa.
   dog_DEF him_DAT bit-off finger_DEF
   ‘The dog bit off his finger.’

---

¹ The literature on so-called “possessor raising” in various languages is extensive, and we are able to review it here only partially. References to specific studies are made where they directly bear on points of our analysis.

---

* This paper is dedicated to Wayles Browne as a token of our appreciation and respect. A version of this article was presented in Paris, in December 2008, at the École Normale Supérieure. We thank the audience for their comments, and in particular Jacqueline Guéron, Richard Kayne, Hilda Koopman, and Dominique Sportiche. We also thank Richard Kayne and an anonymous reviewer for their comments on a previous version of the article.

(1) b. Te’ mu namerixa čadara.
   they him\textsubscript{DAT} found umbrella\textsubscript{DEF}
   ‘They found his umbrella.’

c. Te ne mu sāobštixa imeto.
   they not him\textsubscript{DAT} communicated name\textsubscript{DEF}
   ‘They didn’t communicate his name.’

(2) a. Kaza se [če sa mu namerili čadara],
   said\textsubscript{SG} REF\textsubscript{L} that are\textsubscript{PL} him\textsubscript{DAT} found umbrella\textsubscript{DEF}
   ‘It was said that they found his umbrella.’

b. Kaza mu se [če sa namerili čadara],
   said\textsubscript{SG} him\textsubscript{DAT} REF\textsubscript{L} that are\textsubscript{PL} found umbrella\textsubscript{DEF}
   ‘It was said to him that they found the umbrella.’
   ‘It was said that they found his umbrella.’

(3) a. Kaza [če ne mu se vārtjala glavata ot vinoto],
   said\textsubscript{SG} that not him\textsubscript{DAT}REF\textsubscript{L} spin\textsubscript{EVID} head\textsubscript{DEF} from wine\textsubscript{DEF}
   ‘He said his head was not spinning because of the wine.’

b. Kaza [če glavata ne mu se vārtjala t1 ot
   said\textsubscript{SG} that head\textsubscript{DEF} not him\textsubscript{DAT}REF\textsubscript{L} spin\textsubscript{EVID} from
   wine\textsubscript{DEF}
   ‘He said his head was not spinning because of the wine.’

(4) a. *Jumrukata ne mu udari masata.
   fist\textsubscript{DEF} not him\textsubscript{DAT} hit table\textsubscript{DEF}
   ‘His fist did not hit the table.’

b. Jumrukata mu ne udari masata.
   fist\textsubscript{DEF} him\textsubscript{DAT} not hit table\textsubscript{DEF}
   ‘They pulled out the tooth of the wisdom to Juan.’

The examples in (1) have been taken in the literature on Bulgarian to constitute a homogeneous construction, and have been analyzed as involving either movement of the clitic from the DP expressing the possessee (Franks and King 2000: 276; Stateva 2002; Moskovsky 2004) or direct base generation of the clitic in the clausal dative clitic position (Schick 2000; Schürcks and Wunderlich 2003, section 4; Tomic forthcoming).

Here we argue that in fact two distinct constructions should be recognized. The first, identical to what is sometimes referred to as ‘possessor raising’ in Romance, imposes a benefactive/malefactive reading on the possessor, is limited to inalienably possessed body parts (with some extensions), and shows properties of a base-generated construction; the other, which does not have any benefactive/malefactive connotation, nor limitation to inalienably possessed DPs, involves instead movement of the clitic from within the DP that expresses the possessee.\footnote{We ignore here certain differences among the Romance languages, which are orthogonal to our concerns. For example, those pertaining to the obligatory vs. optional character of the dative clitic (compare (ia) with (1b); in (ib), either gli or a Gianni is possible, but not both), or the possibility vs. impossibility of a full prepositional dative (compare (ia–b) with (1c)).}

2. A Comparative Puzzle

The Romance construction corresponding to (1) is subject to a number of well-known restrictions, listed here in (1a–c).\footnote{These restrictions are discussed for French by Kayne (1977, section 2.15) and Vergnaud and Zubizarreta (1992, section 1). They seem to be shared by Spanish (Picallo and Rigau 1999; Sánchez López 2007) and Italian.}

\footnote{With respect to these properties Romanian appears to pattern with Bulgarian rather than with the other Romance languages (see fn. 16 below).}
It is limited to inalienable possession, and admits only predicates that affect their objects and impose a benefactive/malefactive reading on the external possessive dative clitic.

See the contrast between (5) and (6) below:

(5) a. On lui a coupé les cheveux. French
   IMP him\textsubscript{DAT}/her\textsubscript{DAT} has cut the hair
   ‘They cut his/her hair.’ (Kayne 1977: 159)

b. El gato le arañó la cara. Spanish
   the cat him\textsubscript{DAT} scratched the face
   ‘The cat scratched his/her face.’ (Sánchez López 2007: 153)

(6) a. *Tu lui aimes bien les jambes. French
   you him/her\textsubscript{DAT} love\textsubscript{2SG} well the legs
   ‘You like his/her legs.’

b. *Le odio el carácter. Spanish
   him\textsubscript{DAT} hate\textsubscript{1SG} the character
   ‘I hate his character.’

(77) a. Gli hanno rotto la macchina. Italian
   him\textsubscript{DAT} have\textsubscript{3PL} broken the car
   ‘They broke his car.’

(7) a. Le médecin leur a examiné la gorge/*les gorges.
   the doctor them\textsubscript{DAT} has examined the throat/ the throats
   ‘The doctor examined their throats.’

b. Le médecin a examiné leur gorge/leur gorges.
   the doctor has examined their throat/their throats
   ‘The doctor examined their throats.’

(8) a. Hanno loro lavato la testa/*le teste.
   have\textsubscript{3PL} them\textsubscript{DAT} washed the head/ the heads
   ‘They washed their heads.’

5 As noted in the literature (see, for example, Vergnaud and Zubizarreta 1992: 597), inalienable possession extends to certain kinship terms and familiar objects (‘daughter’, ‘home’, ‘car’, ‘umbrella’, etc.), though variation exists among languages (and speakers) concerning the membership in the class of extended inalienables. To take one example, Italian (ia), but not French (ib), can apparently extend inalienable possession to (some) inanimate objects:

(i) a. Al tavolo, qualcuno gli ha segato tutte le gambe. Italian
    to-the table someone it\textsubscript{DAT} has sawn all the legs
    ‘The table, someone has sawn off all its legs.’

    (Lamiroy 2003: 259 citing Leclère 1976)

   For further discussion, see Lamiroy 2003, sections 2.3 and 3.

6 It would be nice if we had a precise notion of “affectedness” allowing us to tell which predicates affect their objects and which do not. Attribution is not always straightforward (for some discussion, see Kayne 1977: 158, and references cited there). Certain predicates appear to affect their objects under some conditions but not others. For example, voir ‘to see’ in French and vedere in Italian appear to be “affecting” with strict inalienables (body parts) but not with extended inalienables. For French, see Lamiroy (2003, fn. 5 and related text) and for Italian the contrast in (i):

(i) a. Le ho visto le gambe.
    her\textsubscript{DAT} have\textsubscript{1SG} seen the legs
    ‘I saw her legs.’

   b. ??Le ho visto la madre/la macchina.
    her\textsubscript{DAT} have\textsubscript{1SG} seen the mother/the car
    ‘I saw her mother/car.’
(8) b. Hanno lavato la loro testa/le loro teste.
    have3PL washed the their head/the their heads
    ‘They washed their head/heads.’

Ic. The NP expressing inalienable possession may only be modified by a restrictive adjective, not by an appositive one, as shown in (9a) and (10a) (see Kayne 1977: 161; Vergnaud and Zubizarreta 1992: 603f). This again contrasts with the case containing a possesive inside the DP, as in (9b) and (10b):7

(9) a. *Tu lui as photographié la belle bouche.
you him/her have2SG photographed the beautiful mouth
    ‘You photographed his/her beautiful mouth.’
    (Kayne 1977: 161)

b. Tu as photographié sa belle bouche.
you have2SG photographed his/her beautiful mouth
    ‘You photographed his/her beautiful mouth.’
    (Kayne 1977: 161)

(10) a. Gli hai fotografato la (<bella>) bocca
    himDAT have2SG photographed the beautiful mouth
    (<bella>),
    beautiful
    ‘You photographed his beautiful mouth.’

b. Hai fotografato la sua <bella> bocca.<bella>.
    have2SG photographed the his beautiful mouth beautiful
    ‘You photographed his beautiful mouth.’

At first sight, Bulgarian does not seem to obey any of these restrictions. First, it allows “possessor raising” also with predicates which do not affect their objects nor impose a benefactive/maleactive reading on the possessive dative. See (11), the equivalents of which are indeed impossible in Romance (but see fn. 16 on Romanian):

(11) a. Az mnogo mu xaresvam novata šapka.
    I very much himDAT like1SG newDEF hat
    ‘I love his new hat.’
    (Stateva 2002: 649)

b. Ne mu pomnja vizionomijata.
    not himDAT remember1SG faceDEF
    ‘I don’t remember his face.’

c. Ne mu poznavam prijatelja.
    not himDAT know1SG friendDEF
    ‘I don’t know his friend.’

d. Az mu polučix pismoto.
    I himDAT received1SG letterDEF
    ‘I received his letter.’

e. Boris Simeonov mi beše pārvijat profesor po
    Boris Simeonov meDAT was firstDEF professor in
    ezikoznanie.
    linguistics
    ‘Boris Simeonov was my first professor of linguistics.’

Second, unique inalienable body parts and unique extended inalienable DPs, like ‘head’, ‘face’, ‘stomach’, ‘nose’, (‘mother’, ‘home’), etc., can either be singular or plural, again differently from Romance, where, as seen in (7) and (8) above, they must be singular:

---

7 As noted by Aoun (reported in Authier 1988: 175, fn. 3), appositive relatives, as opposed to appositive adjectives, can instead modify the NP expressing inalienable possession:

(i) Tu lui a photographié la bouche, laquelle/qui était
    you her/himDAT have photographed the mouth which was
    très belle.
    very beautiful
    ‘You photographed her/his mouth, which was very beautiful.’

In Romance, prenominal adjectives are only appositive, postnominal ones either appositive or restrictive (see Cinque forthcoming for discussion).
(12) Ako jadete mnogo, šteji na pălnite stomaxa/
if eat2PL a lot will REFLEX2PL stomach2DEF/
stomates i peste šte vi stane lošo.
stomachs2DEF and then will you2DAT.PL get3SG sick
‘If you(pl.) eat a lot, you(pl.) will fill your stomach/stomachs and you will feel sick.’

Third, as shown by (13a–b), the inalienably possessed NP can apparently be modified by an appositive adjective (once again differently from Romance).

(13) a. Mnogo ti mrazja toja loš xarakter.
a lot you2DAT hate1SG this bad character
‘I really hate this bad character of yours.’

b. Ne moga da i opiša krasivata kosa. Ne
not can1SG MOD her1SG describe1SG beautiful2DEF hair not
săm poet.
am poet
‘I cannot describe her beautiful hair. I am not a poet.’

In spite of this evidence, which seems to show that Bulgarian does not have a “possessor raising” construction of the Romance type, we are going to argue that it does, and that this construction is subject to all of the restrictions noted above for Romance. The impression that Bulgarian does not have the Romance-type construction comes from the hasty conclusion that the cases in (1) and in (11–13) constitute one and the same construction, comparable to that which (5), (7–8), and (10) belong to. But, as shown below, (1a–b) correspond to the Romance “possessor raising” construction, while (1c) and (11–13) should rather be viewed as akin to the possessive genitive ne/en/etc. ‘of it’ construction familiar from some of the Romance languages.

As can be seen from the contrast between (6c) above and (14) below, a non-affecting verb like Italian dimenticare/ French oublier ‘to forget’ can only appear in the ne/en-construction. The fact that the Bulgarian counterpart of (14), given in (15), is also grammatical suggests that (15) should perhaps be treated on a par with the Romance ne/en construction rather than with the Romance possessive dative con-

struction. For evidence corroborating this conjecture, see section 5, where it will be shown that (15) and the like have all the hallmarks of a movement construction, just like the Romance ne/en construction (Belletti and Rizzi 1981, Burzio 1986: chapter 1):

(14) a. Ne ho dimenticato il nome.
itGEN have1SG forgotten the name
‘I have forgotten his/its name.’

b. J’en ai oublé le nom.
I itGEN have1SG forgotten the name
‘I have forgotten his/its name.’
(cf. *Je lui ai oublié le nom ‘I him2DAT have forgotten the name.’)

(15) Az sâm mu završil imeto.
I am him2DAT forgotten name2DEF
‘I have forgotten his/its name.’

Even if Bulgarian is generally taken to have morphologically neutralized the genitive and dative cases, so that one could think that the “dative” clitic in those cases that have no correspondent in the Romance “possessor raising” construction is actually a “genitive” clitic (like Romance en/ne), we do not push the resemblance that far, partly because of Mrčev’s (1978: 189), Duridanov’s (1993: 241), and Pancheva’s (2004) (diachronic) evidence that Bulgarian really has no genitive, but just dative, also for possession.8

Once the movement construction is factored out, the remaining cases, i.e., those with an inalienably possessed DP affected by the predicate, and with a benefactive/malefactive interpretation of the external possessive clitic, involve no extraction of the possessor, exactly as their Romance counterparts in (5), (7–8), and (10).

---

8 This actually needs to be looked into more carefully since the DP-internal dative clitic can quite generally correspond to the subject or object of a deverbal noun (agent/theme), or a subjective experience dative, but can never correspond to a (goal) indirect object argument (Franks 2000: 62; Franks and King 2000: 56 and 276ff).
This line of reasoning thus leads us to posit the existence of two separate constructions involving external possessive clitics in Bulgarian, which have so far been lumped together under the general label of possessor raising.

We label the construction akin to Romance “possessor raising” the “base-generated possessor construction,” distinguishing it from the one involving extraction on the basis of certain properties that are present in one but not the other construction.

Before examining these properties, we recall in the next section some of the evidence that shows the Romance “possessor raising” construction to be a misnomer, given that it does not involve raising but rather base generation, of the dative clitic outside of the DP expressing the possessee.

3. The Non-Movement Nature of the Romance “Possessor Raising” Construction

One first piece of evidence against taking the possessive dative clitic in Romance to raise from inside the DP expressing the inalienable body part is the fact, observed in Kayne (1977: 1596), that such extraction would sometimes have to cross a PP node as in (16). Given that PPs, as opposed to simple DPs, normally block extraction (compare (17a) and (18a) with (17b) and (18b)), it is reasonable to infer from the contrast between (16) and (18a) that the external possessive dative clitic gli (as opposed to the external possessive genitive clitic ne) cannot have resulted from movement out of the DP expressing the possessee:

(16) Gli hanno urlato [PP ne [DP gli orecchi]].
    him concentrates [DP the ears]
    ‘They shouted in his ears.’

(17) a. *Di chi hanno urlato [PP ne [DP gli orecchi]]?
    of whom have concentrations [DP the ears]
    ‘Who was it that they shouted in his ears?’

b. Di chi hanno medicato [DP gli orecchi]
    of whom have treated [DP the ears]
    ‘Of whom have they treated the ears?’

Another problem with taking the clausal dative clitic to originate inside the DP expressing the inalienable body part is that, as seen in (7) and (8) above, repeated here as (19) and (20), the putative sources of extraction of the possessor dative clitic in (19b) and (20b) lack the restriction found in (19a) and (20a) according to which the possessed body part must be singular even when the possessor clitic is plural:

(19) a. Le médecin leur a examiné la gorge/ *les gorges.
    the doctor themDAT has examined the throat/ the throats
    ‘The doctor examined their throats.’
    (Vergnaud and Zubizarreta 1992: 597, 602)

b. Le médecin a examiné leur gorge/ leur gorges.
    the doctor has examined their throat/ their throats
    ‘The doctor examined their throats.’
    (Vergnaud and Zubizarreta 1992: 598, 602)

(20) a. Hanno loro lavato la testa/ *le teste.
    haveSPL themDAT washed the head/ the heads
    ‘They washed their heads.’

b. Hanno lavato la loro testa/ le loro teste.
    haveSPL washed the their head/ their heads
    ‘They washed their head/heads.’

These examples suggest that it is rather dubious to derive the external possessive dative clitic in (19a) and (20a) via raising from the DP expressing the possessee.

A third difficulty for the raising analysis comes from the fact that in some cases there simply is no plausible source for the dative clitic
inside the DP expressing the inalienable body part. See, for example, (21), from Kayne (1977: 160).

(21) Elle lui a mis la main [là où il ne she him/her_{DAT} has put the hand there where it NEG fallait pas].
was-appropriate not ‘She put her hand where she shouldn’t have.’

9 Further difficulties for a movement analysis of “possessor raising” are discussed in Kayne 1977, section 2.15, and Guéron 2006, section 2.4.2. Given cases like (i), which seem to be characterized by the same type of coreference between the pronoun and the DP expressing the body part (cf. Vergnaud and Zubizarreta 1992), one would presumably also have to posit movement of the DP internal possessor to a thematic (subject or object) position:

(i) a. Loro hanno alzato la mano.
they have_{PL} raised the hand
‘They raised their hands.’

b. Lei lo ha colpitosella testa.
she him_{ACC} has struck on_{DEF} head
‘She struck him on the head.’

Also, cases like (ii) (cf. Kayne 1977: 163) could hardly involve movement of the clitic from both the object DP and the complement PP, or movement from the object DP licensing a pronominal gap inside the PP, given the general inability of clitics to license pronominal gaps (see Chomsky 1982: 65, based on an observation of Luigi Rizzi’s, and Burzio 1986: 32ff):

him_{DAT} have_{SG} removed the arm from under the head
‘I removed his arm from under his head.’

Landau (1999), without addressing the evidence mentioned above, claims that “possessor raising” in Romance (and Hebrew) involves movement out of the DP expressing inalienable possession. But to us his arguments do not seem convincing. Even his “most straightforward evidence” for extraction—namely, that its possibility from subcategorized PPs but not from adjunct PPs is indicative of island sensitivity and thus of movement—is less than clear. Quite apart from the general island character of PPs, that contrast could very well depend on a requirement that the dative possessor be a co-argument of the body part DP/PP within the same minimal clause. See also Guéron’s (2006) critical discussion.

4. The Bulgarian Base Generated Possessor Construction Akin to the Romance Construction

Bulgarian too offers particularly clear evidence that at least some of its possessive datives cannot have raised from inside the DP/PP which contains the possessee. These are the external possessive datives that receive a benefactive/malefactive reading and are interpreted as possessors of an inalienable body part (or its extensions), like the Romance base-generated possessors discussed in the previous section.

In Bulgarian, differently from Romance, the same possessive dative clitic is free to occur either DP-internally or DP-externally:

(22) a. Tja mu ščupi [DP malkija präst].
she him_{DAT} broke_{SG} little_{DEF} finger
‘She broke his little finger.’

b. Tja ščupi [DP malkija mu präst].
she broke_{SG} little_{DEF} him_{DAT} finger
‘She broke his little finger.’

However, the DP internal variant of (22) must meet a crucial requirement not holding of the DP external variant; namely that the DP containing the possessive clitic must be definite.10 No possessive dative clitic can appear inside a DP when this is indefinite (Penčev 1998: 30; Dimitrova-Vulchanova and Giusti 1999: 169; Franks and King 2000: 282; Moskovsky 2004: 221f). See the contrast between (22b) and (23) below:

(23) *Tja ščupi [edin mu präst].
she broke_{SG} a him_{DAT} finger
‘She broke a finger of his.’

As noted, no definiteness requirement holds of the DP external variant, as can be seen from (24), which is the only possible way to render (23):

10 In this case, the clitic follows the demonstrative or whichever element is inflected with the definite article (Penčev 1993; Dimitrova-Vulchanova and Giusti 1999: 169f; Franks 2000: 59ff; Franks and King 2000: 275; Stateva 2002: 660; Schürcks and Wunderlich 2003: 121).
(24) Tja mu ščupi [edin prast].  
    she him\textsubscript{DAT} broke\textsubscript{SG} a finger  
    'She broke a finger of his.'

This evidence suggests that (22a) and (22b) are not related transformationally and, consequently, the external dative clitic in (24) does not have its source inside the DP, but is merged directly in a clausal clitic position and is related to the DP expressing the inalienable body part via a non-movement mechanism.\textsuperscript{11}

Further evidence exists that the possessive dative clitic in the Romance-type base generated possessor construction of Bulgarian cannot have raised from the DP expressing inalienable possession. We have just noted that the DP containing a possessive dative clitic must be overtly marked as definite. However, most kinship terms (dašterja 'daughter', žena 'wife', etc.) seem to provide an exception to this constraint (Franks and King 2000: 282; Moskovsky 2004: fn. 1). They can be followed by a possessive clitic even in the absence of an overt definite article (as a matter of fact, if a possessive clitic is present in the DP, they cannot take the definite article).\textsuperscript{12} See (25):

(25) Te sāsipaxa [dašterja*(ta) mu]/ [žena*(ta) mu]/...  
    they ruined\textsubscript{SPL} daughter\textsubscript{DEF} him\textsubscript{DAT}/ wife\textsubscript{DEF} him\textsubscript{DAT}  
    'They ruined his daughter/wife/...'

However, when the possessive clitic is in the DP-external position, the definite article on the kinship term inside the DP is obligatory:\textsuperscript{13}

(26) Te mu sāsipaxa [dašterja*(ta)]/ [žena*(ta)]/...  
    they him\textsubscript{DAT} ruined\textsubscript{SPL} daughter\textsubscript{DEF}/ wife\textsubscript{DEF}  
    'They ruined his daughter/wife/...'

This suggests that the clitic in (26) cannot have originated in the position of the clitic in (25), for we would expect the definite article on the kinship term in (26) to be just as impossible as in (25), contrary to fact.

One more case exists where the external dative clitic finds no possible source inside the DP, thus supporting a base generation analysis of the Romance-type Bulgarian possessor construction.

As in Romance (where they also constitute evidence for the non-movement nature of the corresponding construction), Bulgarian has idioms with external possessive dative clitics which do not have a variant with a DP-internal clitic. Compare (27a) with (27b):\textsuperscript{14}

sāsipaxa majkata). They are entirely natural however in colloquial expressions like (i):

(i) Njama da mi obiždaš majkata.  
    not have MOD me\textsubscript{DAT} insult\textsubscript{SG} mother\textsubscript{DEF}  
    'You should not insult my mother'.

\textsuperscript{14} Analogously, in Romance no variant exists with a possessive adjective internal to the DP, or with extraction of nelèn. See the French and Italian examples (i) and (ii) ([a–b]) from Lamiré 2003: 260f, who notes the same facts also for Spanish and Dutch:

(i) a. Luc lui casse les pieds.  
    Luc him/her\textsubscript{DAT} breaks the feet  
    'Luc bothers him/her.'

b. Luc casse ses pieds.  
    Luc breaks his/her feet  
    (no idiom interpretation available)

c. Luc en casse les pieds.  
    Luc him\textsubscript{GEN} breaks the feet  
    (no idiom interpretation available)

(ii) a. Gli hanno rotto le scatole.  
    him\textsubscript{DAT} have\textsubscript{SPL} broken the boxes  
    'They annoyed him.'

b. Hanno rotto le sue scatole.  
    have\textsubscript{SPL} broken the his boxes  
    (no idiom interpretation available)

c. Ne hanno rotto le scatole.  
    him\textsubscript{GEN} have\textsubscript{SPL} broken the boxes (no idiom interpretation available)

\textsuperscript{11} Also see Schürcks and Wunderlich 2003 (135). Non-movement mechanisms proposed in the literature are: (anaphoric) Binding by the possessive dative of the determiner of the DP expressing the body part (Guérin 1985, Demonte 1988, among others), or of a pro subject of the DP expressing the body part (Authier 1988, chapter 4), and Predication (Vergnaud and Zubizarreta 1992). For evidence that in Bulgarian "the structural position occupied by the possessive clitic when it shows up preverbally is the one that is otherwise reserved for the Dative clausal clitic," see Stateva 2002: 652 and Pancheva 2004.

\textsuperscript{12} This is true only for the singular. In the plural, as noted by Penčev (1998: 31), all forms must be overtly marked for definiteness.

\textsuperscript{13} For some reason other kinship terms (e.g., majka 'mother', bašta 'father', etc.) accept the definite article in such structures only rather marginally (??Te mu
These cases, in opposition to Romance and to Bulgarian base-generated possessor constructions, show clear signs that movement is involved. For one thing, they cannot occur with an indefinite DP (compare examples (11c–d) above with (29)):

(29) a. *Ne mu poznavam edin prijatel.
   not him\textsubscript{DAT} know\textsubscript{1SG} one/a friend
   ‘I know a friend of his.’

b. *Az mu polučix edno pismo.
   I him\textsubscript{DAT} received\textsubscript{1SG} one/a letter
   ‘I received a letter of his.’

Their ungrammaticality follows directly from the impossibility of the dative clitic to appear inside an indefinite DP (cf. (23)), and from the fact that with non-affecting predicates the dative clitic cannot be directly merged externally. The examples in (29) contrast with (24), which has the possessive dative clitic merged outside of the DP (in the clausal position of dative arguments) and is thus unaffected by the indefinite character of the object.

autres langues romanes. Cette fréquence élevée est due à l’absence de toute contrainte d’ordre sémantique, alors que dans les autres langues romanes le datif possesif indique de préférence, sinon uniquement, la possession d’une partie du corps.” For similar observations, see Avram and Coene 2000, 2008 and references cited there.

(i) a. Îți cunosc prietenii.
   you\textsubscript{DAT} know\textsubscript{1SG} friends\textsubscript{DEF}
   ‘I know your friends.’

b. Mi-a primit scrisoarea.
   me\textsubscript{DAT}-has\textsubscript{1SG} received letter\textsubscript{DEF}
   ‘(S)he received my letter.’

We expect Romanian also to show evidence for the two “possessor raising” constructions of Bulgarian (see, for example, (ii), where the DP expressing inalienable possession in Romanian is modified by an appositive adjective, unlike the French and Italian cases in (9) and (10)), but we do not pursue this question here:

(ii) I-am privit mâinile (albe). (Manoliu-Manea 1996: 727)
    he\textsubscript{DAT}-have\textsubscript{1SG} looked hands\textsubscript{DEF} white
    ‘I looked at her white hands.’

15 To judge from Dumitrescu (1990), Romanian seems to pattern with Bulgarian rather than with the rest of Romance. She reports many Romanian examples, a couple of which are given in (i) below, of the same general type seen in (11), quoting the following telling passage from Bacu (1985: 357): “en roumain, le datif possessif est incomparablement plus fréquent que dans les
That the ungrammaticality of (29) really derives from the impossibility of movement is confirmed by the observation that wherever movement is blocked possessor raising with non-affecting predicates becomes impossible. One such case is provided by the examples in (30a, b) containing non-affecting predicates in which the external possessive dative clitic cannot be construed with a possessee embedded in a PP. Under the possessor raising approach adopted for these cases, their ungrammaticality follows directly from the island character of the PP (cf. (30c)), which blocks the raising of the clitic. Examples (30a, b) should be compared once again with cases like (28) above, which are grammatical precisely because no movement has taken place:

(30) a. *Az i misija [PP za [DP očite __]].
I her\textsubscript{DAT} think\textsubscript{1SG} for eyes\textsubscript{DEF}

‘I think of her eyes.’

b. *Az ne ti zavisja [PP ot [DP parite __]].
I not you\textsubscript{DAT} depend\textsubscript{1SG} from money\textsubscript{DEF}

‘I don’t depend on your money.’

c. *Na kogo govori [PP šas [DP zetja __]].
to whom spoke\textsubscript{2SG} with son-in-law\textsubscript{DEF}

‘To whose son-in-law did you talk.’

6. Further Consequences

A direct consequence of the proposed distinction between the two types of possessor constructions in Bulgarian is the possibility of having a DP external possessive clitic when the DP expressing the possessee is pronominalized. See the contrast between (31a) and (31b):

(31) a. Question

A prästa mu?
and finger\textsubscript{DEF} him\textsubscript{DAT}

‘And [what about] his finger?’

b. *Az mu go otxapa.
dog\textsubscript{DEF} him\textsubscript{DAT} it\textsubscript{ACC} bit\textsubscript{3SG}

‘The dog bit it on him.’

(32) a. Kučeto mu goi otxapa [proa].
dog\textsubscript{DEF} him\textsubscript{DAT} it\textsubscript{ACC} bit\textsubscript{3SG}

b. Az mu goi polučix [proa].
i him\textsubscript{DAT} it\textsubscript{ACC} received\textsubscript{1SG}

Another consequence is the contrast between (33) and (34), related to the possibility of having a possessive clitic both inside and outside the DP expressing the possessee. If the external possessive clitic is base generated outside of the DP in the former case, but comes from inside the DP in the latter case, then only in the former case is cooccurrence with a DP-internal possessive clitic expected to be possible (barring spell-out of traces).
containing an unbound A-bar trace leads to an unacceptable result. Consider Italian (37):

(37) *I Rossi, [regalare t, ai quali], non so cosa, the Rossis give\textsubscript{INF} to whom\textsubscript{PL} not know what potrei t\textsubscript{k},
      could\textsubscript{SSG}

(cf. Non so cosa potrei regalare ai Rossi. 'I don't know what I could give to the Rossis.')

An A-bar moved phrase containing a trace of A-movement does not lead to a comparable problem, as the grammaticality of (38) shows:

(38) [venduto t, ai Rossi], I' appartamento; non è stato t\textsubscript{k},
      sold to-the Rossis the apartment wasn't

In this respect, the trace of a clitic behaves like the trace left by A-movement since it does not lead to unacceptability, (39). If so, then in (36) we have a case analogous to that of (37) (modulo the A instead of A-bar traces).

(39) [venduto t, ai Rossi], non t\textsubscript{I}, hanno t\textsubscript{k},
      sold to-the Rossis not it have\textsubscript{SPL}

The generalization that emerges is that a configuration resulting from movement of a certain type (A or A-bar) followed by remnant movement of the same type (A or A-bar) leads to unacceptability: a situation possibly related to the fact that Reconstruction of a certain type of movement happens in one solution (cannot feed itself).\footnote{The grammatical status of (38) and (39) suggests that Reconstruction of A-bar chains may feed Reconstruction of A-chains.}

The ungrammaticality of (35b) is in fact parallel to that of (40) in Italian with \textit{ne}-extraction interacting with the A-movement of the object DP to subject position:\footnote{In both cases extraction of the clitic after the DP object has raised to preverbal subject position would involve an illicit downward movement. The possibility of so-called \textit{en}-avant in French remains to be understood in relation to its impossibility in Italian (and Bulgarian).}
(40) "Il nome t_{j,k} non ne, è stato comunicato t_{k},
the name not it_{gen} has been communicated
‘His name was not communicated.’

In (35a), on the other hand, the possessive clitic is base generated outside of the DP object expressing the possessee, as we have argued above, so no issue of simultaneous reconstruction of two A-chains arises here and grammaticality is completely expected.

7. Conclusion

In this paper, we have presented evidence that the traditional “possessor raising” phenomenon of Bulgarian (and, perhaps, that of other Balkan languages as well) should be decomposed into two separate cases. The first, here labeled “the base-generated possessor construction,” appears to have the same properties as the Romance “possessor raising” construction, namely:

(i) It is limited to inalienable possession (and its extensions);
(ii) It is limited to predicates which affect their objects and impose a benefactive/malefactive interpretation on the external possessor; and
(iii) It does not involve movement of the possessive clitic from inside the DP expressing the possessee.

The second case, which we could label “possessor raising” proper, is characterized by the opposite properties:

(iv) It is not limited to inalienable possession;
(v) It contains predicates that do not affect their object nor impose a benefactive/malefactive interpretation on the external possessor; and
(vi) It involves raising of the internal possessive clitic to a clausal dative position.

Crucially, then, the non-movement option in only available (in Bulgarian, as well as in Romance) whenever a dative clitic can be directly merged in the clausal dative position licensed by predicates that affect their objects, and assign to them a benefactive/malefactive theta-role, rather than the possessive one assigned inside the DP (as in the genuine possessor raising case). Since the predicates compatible with the latter construction (such as know, forget, describe, etc.) do not license any benefactive/malefactive theta-role, the clausal dative position is able to host via raising only clitics that have received a (possessive, or other) theta-role inside the DP.\(^{19}\)

We leave open the exact mechanism responsible for the added possessive interpretation that relates the external benefactive/malefactive dative to the DP expressing the inalienable possession in Romance and Bulgarian.

References

\(^{19}\) Richard Kayne (p.c.) has made the interesting suggestion that even the Romanian-type construction might after all involve movement of the dative clitic doubling an overt (see (33) above) or silent DP inside the DP expressing the possessee from where the clitic is extracted. If that conjecture were to turn out to be correct, the differences that we have noted here between the two constructions would have to be derived in some other fashion.

Morphology-Free Syntax: Two Potential Counter-Examples from Serbo-Croat*

Greville G. Corbett

1. Introduction

An important aspect of Wayles’ work is his combined interest in the small and the large: he is very interested in the detail, the individual items of language, and at the same time in how these impact on largescale generalizations. For instance, his (1978) paper on the Russian verb видеть ‘see’ focuses on this single verb, whose stressed prefix suggests it would be perfective, according to the general rule, yet it is imperfective.

In this paper I look at the very general principle of morphology-free syntax and consider two potential counter-examples from Serbo-Croat. Following Wayles’ usage in Corbett and Browne 2009, I use “Serbo-Croat” as a linguistic cover term for Bosnian, Croatian, Montenegrin, and Serbian; an alternative is Central South Slavonic. The first example has been discussed previously, and is recapitulated in order to highlight the type of argumentation involved. It concerns conjoined noun phrases (the “carelessness and capriciousness problem”). The second has received little attention, and is our main focus. It may be summarized as the “two colleagues problem.”

2. Morphology-Free Syntax

* The support of the AHRC under grant AH/D001579/1 is gratefully acknowledged. While working on this topic it was natural to ask Wayles for his view, so I thank him for his (unwitting) help. I am also very thankful to Mirela Dumić for her linguistic intuitions, to Matthew Baerman, Ranko Matasović, and Ljubomir Popović for suggestions and comments, and to Steven Franks and an anonymous reviewer for their reactions to the final draft.
